

## PVC Containment Pools

Often classified as “secondard containment”, portable containment pools are a useful safeguard for job-site equipment. Many state and local regulations require these controls as a part the overall prevention plan.

Commonly used for equipment such as cars, trucks, light plants, generator sets, pumps, tankers, drums, IBCs, totes, frac tanks and heavy equipment. The one-piece, rugged pools will catch and contain all oil, hydraulic fluid, gas, antifreeze, water, and grease that may leak or drip from engines and equipment. The design permits immediate response, easy storage and transport.

Manufactured using durable 22 ounce yellow PVC with RF leak-proof welded seams, IVI Containment Pools feature 3” side walls that contain closed cell, HDPE solid foam rods that insure durable use. They are lightweight, reusable, and easily deployed. Simply clean and store after use.

Material Weight	22 oz sq yd
Fabric	PVC coated polyester
Color	Yellow
Construction	RF-Sealing
Bolster	HDPE, closed cell
Sizes	Stock and Custom Sizes

Features excellent rip, tear and puncture resistance for demanding applications and rough terrain. Durable and sturdy unit is constructed of chemical-resistant materials.

Available in standard sizes (3' x 6' , 3' x 9' , 4' x 8' , 8' x 8'). Custom sizes and dimensions are available upon request
